

# EXHAUST FANS

**Where is the exhaust fan to be located?**

Installation locations include: above a shower, toilet, in bathroom, etc.

**Will you be installing a vented/ducted fan?**

If so, you will need to contact an HVAC to install the vent and ductwork, then call an electrician to install the actual fan and hook up the power, as ELECTRICIANS ARE ONLY LICENSED TO DO THE ELECTRICAL WORK. (We do advise that the HVAC company do not duct it to the attic due to the moisture.)

**Will this be a replacement exhaust fan?**

If so, we can replace the fan and install the electrical.
