

# STANDARD LIGHT FIXTURE INSTALLATION

**Is the standard light fixture prewired (existing wire or fixture already there to take down and replace)?**

If so, the price will be much less than it would to install the wire and the fixture.

**What is a considered a "standard light fixture installation"?**

One that is not considered to be a large, heavy chandelier and the installation height is 14 ft and under. Coach lights, recessed can lights, pendant lights and small chandeliers are standard types of lights.

For recessed can lights, the price includes the can light itself, cutting the hole, the trim around the light and the wiring *in between* each light.

**Are light switches included with a standard light fixture installation?**

Additions to standard light fixture installations are switches to control the light and dimmer switches. They are an additional cost.

**Does your standard light fixtures need wire?**

If so, a technician will have to come out to provide the estimate.
