

RANGE HOODS

Where is the exhaust fan to be located?

Installation locations include: under kitchen cabinets, above stoves, between cabinets, over outdoor grills, over kitchen islands, etc.

Will you be installing a vented/ducted fan?

If so, you will need to contact an HVAC to install the vent and ductwork, then call an electrician to install the actual fan and hook up the power, as licensed electricians, we can only do the electrical work. (We advise that the HVAC company do not duct it to the attic due to the moisture.)

If it is an under the cabinet fan in the kitchen where the air blows back out into the room (not vented with ductwork), we can do the installation and the electric.

Will this be a replacement exhaust fan?

If so, ON-LINE Electric can replace the fan and install the electrical.
