

# Chandeliers

**Call today for an estimate! (813) 662-0362**

- **ON-LINE Electric does their best to provide the most accurate over-the-phone estimates.**
- **Our professional service technicians will give the final price on your service.**
- **If you reject the price/service, there is no charge for the visit. Below is helpful information to have before you call:**

**How large is the chandelier?**

Take a look at the height and dimensions on the box if available

**Is there existing wiring to the desired installation location (this means it is prewired)?**

**How many bulbs does the chandelier have?**

**Is this a crystal chandelier?**

**If so, are the crystals already hung on it or will you need the service technician to hang them?**

Each crystal hangs from a wire that goes through the structure of the chandelier. Some come already installed. If not and you would like for our technician to do this, there is an extra charge. The electrical technician will need to provide the price on site with our free, no obligation, on-site estimate.

**Would you like the chandelier to be dimmable?**

If so, you will need dimmable bulbs. Regular bulbs cannot be used; the lights may flash or not work at all. A dimmer switch will be needed; the electrical technician must provide the price on-site.

**Will you be providing the dimmer switch or will ON-LINE Electric be picking it up for you?**

We recommend that the customer choose and purchase the dimmer switch so that it can be matched to the design of their house. If you have already purchased it and it is still at the store, ON-LINE Electric can pick it up for you at no cost as long as it is on the way to the customer's location.
